## PROFILE

Computer Engineering graduate (CUST, 2026) seeking a Full-Stack Software Engineering internship. As a Final Year Project, shipped a complete indoor navigation system (BLE positioning, sensor fusion, A* pathfinding, live tracking). As a Full Stack Developer at Proton Softtech, built and shipped frontend-focused, client-facing web applications in production, with hands-on experience integrating AI-based tools and models into full-stack apps. Comfortable across React/React Native, Node.js, and Firebase, with a growing interest in AI-driven automation.

## SKILLS

- **Languages:** Python, JavaScript/TypeScript, C++, MATLAB
- **Web & Mobile:** React, React Native, Node.js, Flask, REST APIs, Firebase/Firestore, Zustand, HTML/CSS
- **Tools & Infra:** Git/GitHub, SQL, Docker, Kubernetes

## WORK EXPERIENCE

**Full Stack Developer — Proton Softtech** 2025

- Developed and maintained frontend-focused web applications for real clients, including a Hotel Management System and a Hotel Booking Management platform, delivering responsive, client-facing UI connected end-to-end to backend services.
- Partnered directly with clients to translate requirements into production-ready frontend features, adapting to shifting scope and deadlines.

## FEATURED PROJECT — INDOOR NAVIGATION SYSTEM

*React Native · JavaScript/TypeScript · BLE Beacons · Sensor Fusion · Firebase · Applied Algorithms*

- Designed and built an end-to-end indoor navigation system for CUST campus, solving GPS-denied indoor navigation using BLE beacon proximity and IMU-based sensor fusion for dead-reckoning.
- Implemented A* pathfinding over a 163-node, 165-edge campus graph to compute optimal real-time routes.
- Built a cross-platform mobile app in React Native using JavaScript and TypeScript with Zustand, delivering live location updates at a 700ms refresh interval.
- Integrated a Firebase/Firestore backend with a companion web admin dashboard for managing maps, beacons, and navigation data, achieving full-stack ownership from sensor data to UI.
- Collaborated with a 3-person team across sensing, algorithms, and app layers to deliver a fully working demo.

## OTHER PROJECTS

- **Real-Time Object Identification App —** Python/OpenCV application for live object detection.
- **Network Intrusion Detection System —** Flask web app detecting network intrusions in real time using scikit-learn on the NSL-KDD dataset.
- **Salon Management System —** full-stack website for salon service and appointment booking.
- **Cloud-Native University Management System —** team project implementing scalable microservices with containerization and orchestration (Docker, Kubernetes).

## EDUCATION

**BS Computer Engineering — Capital University of Science & Technology (CUST), Islamabad**
2022 – 2026

- Final Year Project: Indoor Navigation System Using BLE Beacons (see above)

**ICS — Punjab College**
2019 – 2021

## CERTIFICATIONS

- Full Stack Web Development — Coursera
- Digital Marketing — NAVTTC
